

## INTERNATIONAL WORKSHOP

RESEARCH DATA MANAGEMENT:  
NANYANG TECHNOLOGICAL UNIVERSITY'S APPROACH

In the era of open science, it is required for us to collect, manage, preserve, and share data that are associated with research activities; and it is our task to address how to practically tackle these challenges.

In this seminar, we invite experts from the Nanyang Technological University to discuss the university's endeavors which are based upon the research data management policy in Singapore. We will also deepen the discussion on how to effectively conduct and support research data management.

We look forward to the participation of everyone who is interested in research data management, who is in the position of supporting researchers at the university libraries and research institutes, and who is engaged in the management of data archives.

**Speakers****Ms. Goh Su Nee**
